

CASE STUDY

MoveMan Pro

Company Name

Roy Trevor Ltd

MoveMan Pro Modules

MoveMan Pro
Trade Storage
International
TabletPC

Accounts software

Sage Line 50

Installation Date

April 2001

Ian Froggatt (IT Manager)

*"MoveMan Pro is versatile
enough to evolve and develop
as we do"*

Background

Roy Trevor Ltd currently provide domestic and commercial removals whilst also providing European moves and shipping from the head office in Warrington. Roy Trevor Ltd has been in the family since it began in 1918 has been run by four generations over its 87 year history.

Roy Trevor Ltd has expanded over these years to employ fifty members of staff over three locations – Warrington, Northwich and Chester. Out of these staff members, twelve use MoveMan Pro on a day to day basis.

MoveMan Pro outline

In April 2001, Roy Trevor took the decision to implement MoveMan Pro on a multi-branch, multi user level. At the time of evaluation it was clear that MoveMan Pro and its compliance with Terminal Services could provide the solution Roy Trevor were looking for – centralised management of their day to day removals operations.

The removals aspect of the software was perfect for the domestic operation. The ability to centralise input and control of the client records as well as manage all surveyor and job resource from one location was a main aim for Roy Trevor.

In addition to the domestic business function Roy Trevor also needed to ensure that MoveMan Pro could effectively facilitate European shipping. This requirement was fulfilled by **MoveMan Pro's international** module that managed and operated all the shipping aspects for individual jobs as well as providing a means to issue trade quotes for groupage work. It is here that Roy Trevor really found the benefit of MoveMan Pro.

The software is very easy to use and each module is simple and methodical. Groupage quotes can be done in a very short space of time ensuring that employee time is used efficiently. The manifest shipping aspect of the job diary is incredibly beneficial, since the drag and drop controls allow all manifest jobs to be quickly allocated to a vehicle to ensure that there is sufficient space for the outbound and inbound removals.

Installation period

After the decision had been made to implement MoveMan Pro a period of planning was undertaken to ensure that all the data from their existing removals management software could be transferred over. This process proved very successful and the disruption to Roy Trevor was kept to a minimum. Within less than a month all the data had been transferred and the MoveMan Pro system operational at all three locations
