MoveMan for TabletPC

Company Name

Britannia Tusons Ltd

MoveMan Pro Modules

MoveMan Pro
Crate Hire
MoveMan for TabletPC

Accounts Software

Sage Line 50

Installation Date

May 2005

James Tuson (Director) –

"MoveMan Pro for TabletPC is a fabulous estimating and sales tool for a growing business while increasing efficiency on a very good program"

Background

Tusons has been established for 72 years and continues to operate from their base in Hertfordshire, employing six office based staff who currently use MoveMan Pro. Tusons have been using MoveMan Pro since its installation in December 1998, for the management of the removals business.

Tusons provide removals, storage and shipping from this location and are long standing members of the Britannia Moving Group.

MoveMan for TabletPC outline

Although Tusons have been using MoveMan Pro for six years, a new business requirement emerged in early 2005 that required Tusons to take their MoveMan Pro installation one stage further.

With a requirement for electronic survey capture placed on Tusons by M & S Shipping, Tusons needed to find a surveying tool that could facilitate this.

Since Tusons currently used MoveMan Pro for their office environment, they needed to look no further than MoveMan for TabletPC. The TabletPC solution, built on HP technology, offered them the chance to integrate their electronic surveys with their office software.

All enquiries for removals are centrally logged at the main office and a surveyor allocated to survey the property.

The major benefit of MoveMan for TabletPC was that the office staff could enter the client enquiry as normal and the details are then synchronised onto the TabletPC for the survey to take on-site.

The surveyor instantly has a survey ready for the property, containing all their moving and address details without the need to re-input.

Tusons have found MoveMan for TabletPC incredibly easy to use with a minimal amount of training. Rooms and items can be easily added from fully customisable drop down lists and Tusons has configured each item extensively to allocate every material needed to pack the items for removal. These materials are then automatically calculated to produce a ready to use listing for the crew.

Tusons also found that the reporting side of the software was extremely comprehensive. All the required reports are catered for by the software and can be produced either on-site with the client or back in the office at a later stage.

Installation period

Once Tusons had decided to take the additional MoveMan for TabletPC module, the installation process was very quick and simple. The TabletPC hardware was ordered and configured within a couple of days and then an EOS trainer was on-site to train on using MoveMan for TabletPC. Within two hours Tusons felt comfortable to take the software out and begin surveying.
